Helpfiles > "Health" menu > "SCC/OCC" windows > "SCC deviation settings" window > Editing an SCC deviation criterion

Editing an SCC deviation criterion

Animals that meet at least one criterion in the *"SCC deviation settings"* window will be included in the *"SCC deviation from milk test report"* window.

To edit an SCC deviation criterion:

1. Open "*Health   SCC/OCC   SCC deviation settings*".

2. Edit the data in the fields, see table below.

3. Click *"Save and close"*.

"SCC deviation settings"

Criterion	Description
Criterion 1:	The animal's SCC values from the last three milk samplings are above X (default 400).
Criterion 2:	The animal's SCC values from the last three milk samplings are above X (default 400) and her SCC values have not decreased with more than Y (default 200) during any of the last three milk samplings.
Criterion 3:	The animal has an SCC value above X (default 700) from any milk sampling during current lactation, and another one above Y (default 400) during current lactation.
Criterion 4:	The animal's SCC value from the last milk sampling is above X (default 1000).

Note! *The SCC values are divided by 1000. If a threshold should be 400,000 SCC, it must be entered as* `400`*. The ranges of all thresholds are 1-4000.*
